Abstract

2-Amino-4-(4-methoxy-phenyl)-10-methyl-4,5,6,7-tetrahydro-1-oxa-dibenzo[a,c]cycloheptene-3-carbonitrile derivatives (**3a-f**) obtained from 6-Arylidene-3-methyl-6,7,8,9-tetrahydro-5*H* benzo[a]cyclohepten-5-ones (**2a-f**) with Cycloaddition of melanonitrile and aluminum oxide in DMF. **2a-f** were obtained by the condensation of 3,methyl-6,7,8,9-tetrahydro-5*H*-bezo[a]cyclohepten-5-ones (**1**) with appropriate aromatic aldehydes.

Graphical Abstract

Key words

Benzosuberone, Amine, Carboniriles, Fungicides, Bactericide, Anti-cancer, Anti-diabetic.

Introduction

Structurally diverse nitrile-containing drugs are in use for a variety of medical treatments. The prevalence of nitrile-containing pharmaceuticals, and the continued stream of potential agents in the clinic, attests to the biocompatibility of nitrile functionality¹. Vildagliptin drug have amino nitrile groups containing anti-diabetic activity². Nitriles are unusual functionalities by virtue of the short, polarized triple bond³. The linear, rod-like geometry has a cylindrical diameter of 3.6 A for the pi system⁴. Resulting in a minuscule steric demand along the axis. For comparison, the CN unit is essentially eight times smaller than a methyl group⁵. Several crystal structures show the nittrile projecting into narrow clefts to

make polar interactions or hydrogen bonds in sterically congested environments⁶. Chalcones are potential biocides as some benzosuberone chalcones and their biological activity due to the α , β unsaturated carbonyl group. Chalcone are associated with wide range of biological activities⁷. Chalcone being a very good synthon, variety of novel heterocycles compounds can be designed with good pharmacological profile.

Prompted by these observations and in continuation of our work on the synthesis of biologically active nitrogen and sulfur containing heterocycles⁸⁻¹², we report in this paper the conversion of 6-arylidene-3-dimethyl-6,7,8,9-tetrahydro-5*H*-bezo[a]cyclohepten-5-ones (**1a-g**) into derivatives of a new heterocyclic system containing amino-nitrile moiety and these compounds **2a-f** were prepared by adopting procedure reported ^{13&14}. The required starting compound 3,-methy-6,7,8,9-tetrahydrobenzo cyclohepten-5-one (**1**) was prepared starting from δ -(p-toloyl)valeric acid.

Results and Discussion

6-Arylidene-3-methyl-6,7,8,9-tetrahydro-5*H* benzo[a]cyclohepten-5-ones (**2a-f**) were obtained by the condensation of 3dimethyl-6,7,8,9-tetrahydro-5*H*-bezo[a]cyclohepten-5-ones (**1**) with appropriate aromatic aldehydes. In the Amino Carbonitrile **3a-f**, the olefinic proton =CH-Ar appeared at δ 7.80 in their ¹H NMR spectra.

Cyclo addition of **2a-f** with melano nitrile in DMF yielded 2-Amino-4-(4-methoxy-phenyl)-10-meethyl-1-oxo-4,5,6,7-tetrahydro-1*H*-dienzo[a,c]cyclohepene-3-carbonitrile

derivatives **3a-f**. The IR spectra of **3a-f** exhibited a band due to 2190 (CN) cm⁻¹; 3280 cm⁻¹ (NH₂) respectively, which indicates the presence of keto, amine and nitrile groups on the moity. Further, in their ¹H NMR spectrum, disappearance of the olefinic proton (=CH-Ar) at δ 7.80 and appearance of a single proton at δ 4.05 (1H, s, 4-H) and presence of amine at δ 4.5-4.95 (2H, bs) confirms the presence of flavonoid ring contains amine and nitrile groups. The proton signals of methyl group and aliphatic protons appeared at expected region.

Experimental

Melting points were determined using Gallankamp apparatus and are uncorrected. IR spectra were recorded on a FT-IR 1605 Perkin-Elmer; 1H NMR in CDCl3 on a Varian FT-80A spectrometer with TMS as an internal standard; and mass spectra on a VG-micro mass 7070H mass spectrometer. TLC was run on Silica gel G coated plates and iodine vapor as visualizing agent.

Compound 3a-f General procedure

A mixture of 6-Arylidene-3-methyl-6,7,8,9-tetrahydro-5*H*-benzo[a] cyclohepten-5-ones **2a** (0.0007 mole), melanonitrile (0.0007 mole) and aluminum oxide-potassium fluoride (5 gr) in DMF solution (10 mL) was heated under reflux for 4 hrs. The progress of the reaction was monitored by TLC. After completion of the reaction, the solvent was removed under reduced pressure and the residue was added to ice water (15 mL). The resulting solution was extracted with chloroform (20 mL). Upon evaporations, the organic layer gave the crude product, which was purified by preparative TLC using 10% ethyl acetate-petroleum ether afforded products

Compound 3a (2-Amino-4-(4-methoxy-phenyl)-10-methyl-4,5,6,7-

tetrahydro-1-oxa-dibenzo[a,c]cycloheptene-3-carbonitrile) : Yield: 75%; m.p. 68-69⁰C; IR (KBr): 2190 (CN) cm⁻¹; 3280 cm⁻¹ (NH₂) ¹H NMR (CDCl₃): δ 1.65-1.68 (2H, m, 6-CH₂), 1.95-1.99 (2H, m, 5-CH₂), 2.35 (3H, s, 10-CH₃), 2.55-2.78 (2H, m, 7-CH₂), 3.93 (3H, s, - OCH₃), 4.05 (1H, s, 4-H), 4.5-4.95 (2H, bs, -NH₂), and 6.65-7.05 (7H, m, Ar- CH); MS: m/z 357 (M⁺); Anal. Found: C, 77.29; H, 5.85; N, 7.81; O,8.94. C₂₃H₂₁O₂N₂ requires C, 77.31; H, 5.88; N, 7.84; O,8.96.%.

Compound 3b (2-Amino-10-methyl-4-phenyl-4,5,6,7-

tetrahydro-1-oxa-dibenzo[a,c]cycloheptene-3-carbonitrile): Yield: 67%; m.p. $85-87^{0}$ C; IR (KBr): 2210 (CN) cm⁻¹; 3490 cm⁻¹ (NH₂) ¹H NMR (CDCl₃): δ 1.65-1.68 (2H, m, 6-CH₂), 1.94-1.96 (2H, m, 5-CH₂), 2.34 (3H, s, 10-CH₃), 2.60-2.78 (2H, m, 7-CH₂), 4.14 (1H, s, 4-H), 4.5-4.95 (2H, bs, -NH₂), and 6.89-7.07 (7H, m, Ar-CH); MS: m/z 327 (M⁺); Anal. Found: C, 80.70; H, 5.78; N, 8.53, O, 4.85. C₂₂H₁₉N₂O requires C, 80.73; H, 5.81; N, 8.56, O, 4.89%.

Compound 3c (2-Amino-10-methyl-4-thiophen-2-yl-4,5,6,7-

tetrahydro-1-oxa-dibezo[a,cycloheptene-3-carbonitrile): Yield: 75%; m.p. $80-85^{0}$ C; IR (KBr): 2200 (CN) cm⁻¹; 3380 cm⁻¹ (NH₂) ¹H NMR (CDCl₃): δ 1.63-1.65 (2H, m, 6-CH₂), 1.95-1.99 (2H, m, 5-CH₂), 2.33 (3H, s, 10-CH₃), 2.55-2.78 (2H, m, 7-CH₂), 4.03 (3H, s, - OCH₃), 4.10 (1H, s, 4-H), 4.6-4.97 (2H, bs, -NH₂), and 6.65-7.05 (6H, m, Ar-CH); MS: m/z 334(M⁺⁻); Anal. Found: C, 71.83; H, 5.35; N, 8.35; S, 9.56; O, 4.62. C₂₀H₁₈ON₂S requires C, 71.85; H, 5.38; N, 8.38; S, 9.58; O, 4.79.%.

Compound 3d (2-Amino-10-methyl-4-pyridin-4-yl-4-5,6,7-

tetrahydro-10xa-dibezo[*a,c*]cycloheptene-3-carbonitrile): Yield: 62%; m.p. 78-80°C; IR (KBr): 2280 (CN) cm⁻¹; 3680 cm⁻¹ (NH₂) ¹H NMR (CDCl₃): δ 1.64-1.68 (2H, m, 6-CH₂), 1.94-1.96 (2H, m, 5-CH₂), 2.34 (3H, s, 10-CH₃), 2.55-2.58 (2H, m, 7-CH₂), 4.14 (1H, s, 4-H), 4.65-4.85 (2H, bs, -NH₂), and 6.89-8.60 (7H, m, Ar-CH); MS: m/z 329 (M⁺-); Anal. Found: C, 77.56; H, 5.74; N, 12.68; O,4.83. C₂₁H₁₉N₃O requires C, 76.59; H, 5.77; N, 12.70; O,4.86.%.

Compound 3e (2-Amino-4-(4-bromo-phenyl)-10-methyl-4,5,6,7-

tetrahydro-1-oxa-dibenzo[*a,c*,]cycloheptene-3-carbonitrile): Yield: 63%; m.p. 67-69⁰C; IR (KBr): 2170 (CN) cm⁻¹; 3390 cm⁻¹ (NH₂) ¹H NMR (CDCl₃): δ 1.66-1.68 (2H, m, 6-CH₂), 1.95-1.96 (2H, m, 5-CH₂), 2.35 (3H, s, 10-CH₃), 2.65-2.78 (2H, m, 7-CH₂), 4.10 (1H, s, 4-H), 4.5-4.95 (2H, bs, -NH₂), and 6.89-7.31 (7H, m, Ar-CH); MS: m/z 407 (M⁺⁻); Anal. Found: C, 64.83; H, 4.63; N, 6.84; O, 3.90; Br,19.62. C₂₂H₁₉N₂OBr Requires C, 64.86; H, 4.66; N, 6.87; O, 3.93; Br,19.65.%.

Compound 3f (2-amino-4-(4-fluoro-phenyl)-10-methyl-4,5,6,7-

tetrahydro-1oxa-dibezo[*a*,*c*]**cycloheptene-3-carbonitrile**): Yield: 60%; m.p. 94-96⁰C; IR (KBr): 2180 (CN) cm⁻¹; 3380 cm⁻¹ (NH₂) ¹H NMR (CDCl₃): δ 1.66-1.68 (2H, m, 6-CH₂), 1.95-1.96 (2H, m, 5-CH₂), 2.35 (3H, s, 10-CH₃), 2.65-2.78 (2H, m, 7-CH₂), 4.10 (1H, s, 4-

Conclusion

Based on the wide range of various biological activities of benzosuberone derivatives and emergence of multidrug resistance of the continued use of antibacterial and antifungal of different microorganisms, we synthesized herein a new serious of benzosuberone derivatives and we thought these molecules will give better results. Most of our molecules have been observed the high rate of anti-inflammatory activity than anti-bacterial activity (Table-I).
