**Abstract**— Question bank. AI Stands out with AI-driven, customizable question generation its -and seamless online exam solution, redefining modern learning and easement. Our platform is designed to provide a seamless, user Friendly experience for learner and educatory alike. It helps student to team and make preparation of entrance. Exam of all level. courser. It if easy for the learner to learn and get eco-Friendly experience.

This explore the application of AI In automating the creation of dynamic Question bank for the individual learner According to their needs. It. purpose is to give dynamic Question of all the courses that learner needs. We propose AI-driven framework that contain machine learning Algorithm Natural Language processing (NLP) neural network to generate, categorize and optimize Question based on contain learning outcomes, courses syllabus and Learner Review.

By analysing the data set of courses syllabus. The AI Can generate the question pattern and personalize it to accommodate different learning style and proficiency level. it Leverage detailed analytic and reporting tools to gain deep sight into performance trends, learning patterns, and progress over time.

By Analysing the course Contain, syllabus of educational content, the AI can generate different medium level Question (easy, hard, medium) and all the generate Question should be unique and also generate number of questions of the dataset which we give to generate the question.

The result that AI generated question bank can perform and generate in both efficiency. and effectiveness for learner. It helps learner reducing workload while preparation of any examination and Knowledge retention.

This paper aims to plan, analyse, design and implement the system for a Question bank using Artificial Intelligence (AI) fix basically a for online exam solution for all the course in education sector.

**Keywords**— AI question bot, Medical question bank, Class 10 AI question bank, AI question bank with answers.

## 1. INTRODUCTION

In recent years, Artificial Intelligence (AI) has played a vital role in human life and rapidly expanded its influence across various platforms (industries, Finance, entertainment) Even though in education sector also. One of the most effective applications, however, is in education. where AI is taking part in education sector for traditional Learning and Assessment practices One effective area where AI's potential remains relatively underexplored is question bank generation All the people using technologies. they all are developed by the technology and the technology also has rapidly developed and they are many communication networks. such as Internet network in house, mobile -and the workplace as well as network for education purpose.

All the people are addicted with the technologies. Information Technology has become to play a vital role in life, especially for education purpose. student comes out of focus for offline education. and the teacher also not entertain the student in offline mode: If student have to research for exam preparation for online exam, they go through from the technology. Everybody wants to acknowledge the news in order to expand the world of learning.

In order to establish the Question Bank system as a repository for online exams, it will select test items that are rarely evaluated for quality, some test will be conducted can be easy for learner to take online examination -and for entrance preparation for government and private education sector The Question bank system can reduce the duration of time of learner and securing Best result to improve the examination of any sites like (Government, or private)

Question bank is often manually created for requiring significant time and effort to ensure coverage of a relevant topic, subtopic, syllabus contain of anything, balanced difficulty levels and alignment with learning objectives. Question bank have inherent limitation they are static, lack adaptability to individual Learner There is a good test item of all the Courses of learner needed. It can choose test set items to create test according to learning objectives.

Applying a computer to simulate student learning through the use of machine learning algorithms to create a question bank system that can be used to assess entrance preparation across the education sector in a dependable and adaptable manner is known as machine learning. It will provide the student's "strengths and weaknesses" following the test.

Question bank system have the potential to address these limitations by automating the creation of question set. AI system... Can generate Question Across Various. Question level (Easy, Medium, hard) set of Questions

This paper explore the Integration of AI technologies into question bank. It help to generate Question set for entrance preparation of Every government or private Examination. It also helps educator, learner and institution. Our goal in conducting this research is to add to the expanding corpus of information about AI in the field of education.

## 2. LITERATURE REVIEW

### **Question Bank system:**

The Question bank system is the Arrangement of question set which is used for understudy scoring result to be the instruments to assess explicit Variables. It is the set of Question which learner studies and practice their courses or syllabus which they needed. It is the collection of Question which Increase the learner scoring result and from this they preparation and they apply on the online test or paper-It in for all the school, college and university for their preparation and scoring the result. it Can pick solid test thing to make some sub test thing.

### **Artificial Intelligence Technology:**

Artificial Intelligence innovation in the Impersonation of human wisdom in the technology. In many capabilities like mental, ability, thinking, creative mind perception reorganization. In Question bank AI play vital role. It generate question that the learner needs AI Generate Question According to their need of Learner. In Question test AI link with API which automatically generate what the learner wants to studies. AI Generate millions of questions for the learner. It helps learner to Generate Question According to the needs of Learner.

### **Automation and Efficiency:**

This platform streamlined assessment with secure online exam solution. AI role is generating Question and scoring assessment automates repetitive tasks This platform Automatic Generate Question set for the learner and It feature is widely recognized in AI-based equation tools that reduce the learner Load and Increase the workflow efficiency and Improve the learner workflow.

### **Data Analytics and progress Tracking:**

By offering real-time insights in to learning progress, Question Bank.ai aligns with AI research. for cured of Analytics for the feedback of learner with performance which help educator and learner for giving command According to the needs of learner. It enhancing feedback mechanism review of these themes within question bank.AI Framework is that how AI can support born individualized learning pathway and Scabble assessment models.

### System Architecture

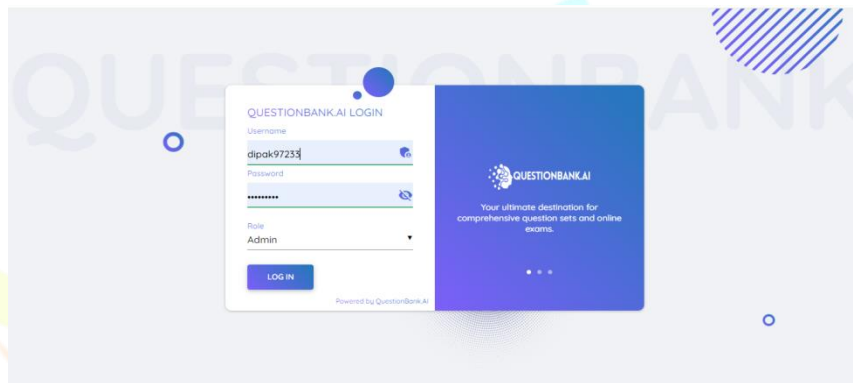

The system framework has specially three modules:-

- Administrator login module
- The Question Input mechanism
- Question Retrieval module and Assessment Module

### Administration login module

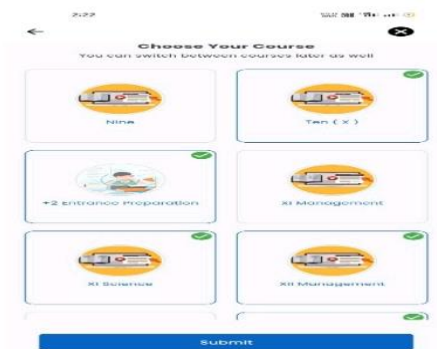

This module gives to the school administration to deal with the data of Question bank Framework Here some highlight approval from admin are:-

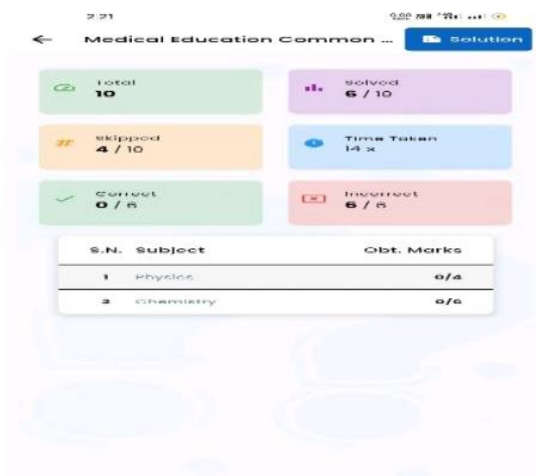

- Active/Inactive the framework
- Import/Export the Question bank data set
- create dataset of course / syllabus or Administration school information.

### The Question Input mechanism

The module is the piece of Framework where question is embedded into the information base by the Question in putters. It characterizes subject/chapter/topic/ subtopic which should be thought of preceding entering question things in to the information bare, such as the examinee's instruction, the question, item, and scoring, the process, the course conclusion, the type of item, the format used, and the degree of difficulty.

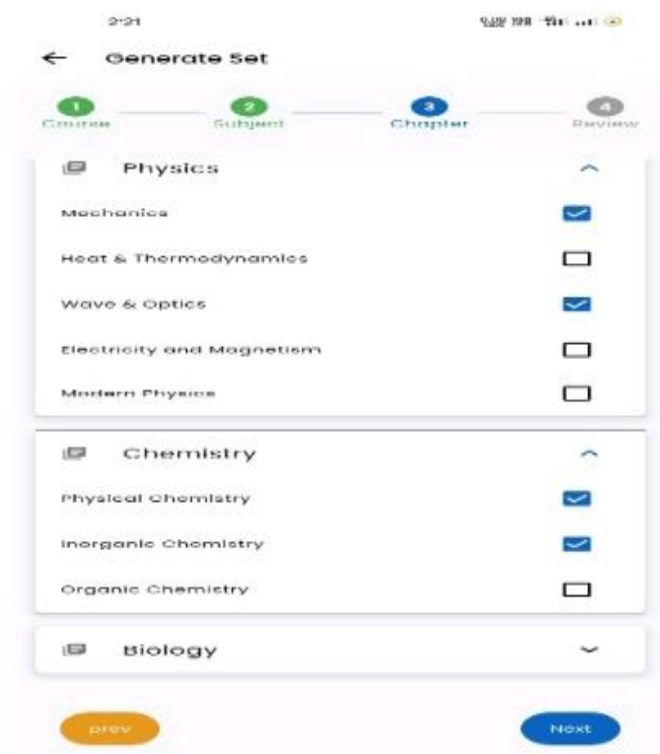

### Question Retrival module

This module take in various contribution for producing or generating question paper with the demand of Learner. It needs learner request to fill the question level branch, Course, semester, Subject, so on. Since the inputted question things are set apart for every boundary, an inquiry paper might be produced to oblige various sorts and level of testing.

### Assessment module

This module assists paper assessors in creating the paper as an assessment Faster and easier . we can arrive at the resolution that the assessment module elimination the possibility of predisposition in paper assessment to a significant degree.

#### Data Collection methods

It is method of surveys will be administered. to the student and educators. The Server will include Questions on veer Experience, learning Engagement progress tracking, Fee back. The focus will be on time saved in grading and preparing questions, along with ease of use.

#### Data Analysis:-

- Quantitative Analyst: It will conducted to determine if there are difference in Student performance between the experimental and control group this Analysts will focus on improvement in test scores, time spent on study and engagement levels
- Qualitative Analysis It will be employed. to identify common themes in the interview and focus group this will help in understanding the qualitative aspects of- user experience, including many challenges.

#### 4. RESULT AND DISCUSSION

The result for from Studies Land user experience with Question bank.ai is that demonstrate a impact on educational practices. learner improve their Learning skill from this platform. It helps the learner for preparation of any online exam of any courses. It generate divine and adaptive question set which keep the learner engaged. The AI divan nature of the platform enables instant feedback and performance of the learner can generate the according to their question generation. It also help to improve efficiency for both student and educator.

#### Several key outcomes have been observed

- (i) Increase Engagement : The ability to generate unique and random question set for the learner practice
- (ii) Enhanced learning efficiency: AI-based focusing on learner feedback and performance and Lerner spend times in outcomes
- (iii)Time Saving For Educators or learner:

Automated Question generation and read time pretest progress tracking reduce the time of educator and Learner for practice and Educator for manual GRADING and question creations

#### Discussion

The platform's success highlight the potential of AI in revolutionizing traditional educational models by in creating performance and personalization At ability to dynamically generate relevant Question of topic, subtopic of Subject with real time progress tracking.

However, AI tools, the quality of personalized feedback may vary based on the underlying and algorithm.

it Focus on the improvement of subject coverage and ensuring that AI Generated content remain aligned with curriculum standards. Question bank. AI as a comprehensive educational tool which helps Learner and Educator for improving strength and scoring result Improving.

## 5. CONCLUSION

This review portrayed the examination plan and execution of the Question bank framework that permit the Learner to take online test and preparation for online exam of any courses. The framework worked with generation of programmed, that contain various Question set, and covering whole educational Syllabus. the framework permits the school to make Question-Bank information base that store the test Question. It is AI-divan which generate Question based on the performance and feedback. It generate random Question set of all the syllabus of educational section. the framework significant qualities are receptiveness, -accommodation and -adaptability adaptable The

Frameworks permits the educators to act as indicated by their request and generate test question rapidly From Question bank to suit an assessment paper created by the instructor requirement The Framework permit School to make a Question-bank information base mot store the test questions.
